

Yussu Naba Umaiza Uhban Session 6

Wednesday, August 19, 2026 10:58 PM

String formatting :-

```
name="Naba"  
age=8  
country_city="UK : London"  
hobbies="Playing Roblox"
```

```
"""
```

```
Naba is my sister whose age is 8 her hobbies are Playing Roblox and she lives in UK: London  
"""
```

Way 1 : Worst way (using normal print statement)

```
print(  
    name, Naba,   
    "is my sister whose age is",   
    age, 8,   
    "her hobbies are ",   
    hobbies, Playing Roblox,   
    "and she lives in ",   
    country_city  
)
```

→ handcode text

Insert variables into the paragraph

Way 2 : Solution --> String Formatting (f-string)

```
print(  
    f"{name} is my sister whose age is {age} her hobbies are {hobbies} and she lives  
    in {country_city}"  
)
```

UK : London.

List:

→ collection of similar or different data type.
